

ABSTRACT

A holder device designed for clasping containers of glue and primer used by plumbers for installing and repairing pipes. The main frame of the holder device is a unit member made of flexible material and further comprising a vertical arm and a horizontal member.

- 5 The vertical arm has an upper end tongue and a free elongated portion at the lower end. The upper end tongue ends with a hook enabling the plumber to adjust the devise on a belt. The holder device also has through rectangular hole in the arm designed for hanging the devise on supporting structures. The elongated portion of the lower end of the arm facilitates this function while bringing more stability and increasing the useful life of the
- 10 holder device. The horizontal member has a carrying part with clasps, designed for
- holding glue and primer containers by pressure grip. Use of the holder device facilitates the movement and decreases the oscillation and instability while carrying and hanging primer and glue containers.
